## ABOUT ME

I'm a self-taught developer from Nigeria. I started with the basics of the web — HTML, CSS, then JavaScript — and kept going because building things that actually run on a screen never got old. JavaScript pulled me into React Native and Expo, where I've shipped two Android apps to real devices. These days I'm pushing into Node.js and the backend side, working toward full-stack. I freelance on contra and Terawork. If you have an idea and need someone who'll actually finish it, that's me.

## Expertise Skills

### Video editing

### Web development

### Client Relations

### Graphic Design

## Education

### Bells University

Undergraduate Student second year Computer Science Engineer

## Work Experiences

### Website Developer

2024-till date

I am a self-taught web developer and Computer Science undergraduate at Bells University, currently building practical, real-world skills in JavaScript, HTML/CSS, Node.js, and React Native. I've designed and deployed working mobile applications from scratch and enjoy turning ideas into functional, user-friendly products. I'm detail-oriented, a fast learner, and committed to writing clean, reliable code — always looking for opportunities to grow and contribute to meaningful projects. Although I am relatively new to the field with two years of experience, I stand out because of the intensity and focus I bring to my work. In that short time, I've already built and shipped applications that solve real problems, proving my ability to deliver results under pressure. My self-taught background shows resilience and adaptability — I don't wait to be taught, I actively seek knowledge and apply it immediately. This makes me resourceful and dependable in fast-moving environments

### Video editor

2018-till date

Editing self-taught from age 12, developing an intuitive command of pacing, timing, and visual storytelling through years of independent practice

Deliver short- and long-form video content using CapCut for editing, transitions, and motion graphics, and Canva for thumbnails and supporting visuals

Manage client projects end-to-end on Terawork — from scoping and pricing to final delivery — with a focus on clear communication and fast turnaround
